

# MaxPro Product Announcement

September 2002

communications

Global Network Solutions

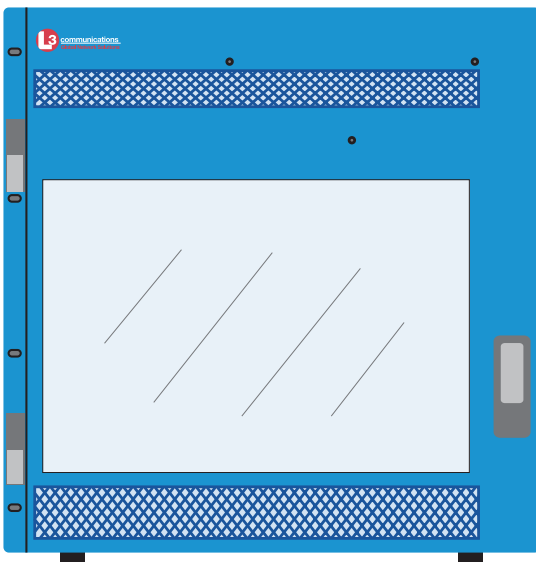

L-3 Communications – Global Network Solutions is pleased to announce the following upgrades to the MaxPro Family of E1/T1 Voice Compression products:

1. Increased voice compression gain for the MaxPro Universal Transcoder
2. New and improved chassis for the MaxPro Universal Transcoder

## 1. Increased voice compression gain for the MaxPro Universal

Increase compression gain of your existing E1 trunks up to 20:1 using the new MaxPro Universal stacked configuration. Previously limited to a 12:1 trunk compression rate, the new MaxPro configuration allows you to "stack" two MaxPro Universal units to boost the capacity of a network trunk (single or fractional) up to 20 times without sacrificing voice quality or ease of maintenance. Managed through a single GUI interface, the 20:1 configuration lowers your cost per channel and allows you to add new subscribers with minimal cost and installation time.

- Allows trunk compression up to 20:1
- Allows operation with fractional network trunks
- Stacked units managed from single GUI interface
- Toll quality voice and easy installation

## 2. MaxPro Universal new chassis features

- Fully compatible with all existing MaxPro components
- Attractive new look
- EMI Lexan window to view card status indicators without opening unit
- Single locking latch to replace multiple thumbscrews
- Improved card design guide for easier insertion/extraction
- Redundant DC power inputs allow 2 independent DC inputs to power the unit
- Quieter acoustic operation with new cooling fans
- Each power supply tray includes integral power switch

Shipment of the new chassis will commence with MaxPro Universal units scheduled for delivery beginning in October 2002.
